Joekers Solutions

We are an ICT Service Provider that specializes in Database Management Systems and Database Application Software Solutions. Our aim and focus is to provide excellent tailored Software Applications and ICT Solutions.

We design and develop interactive software and applications for small, medium and large size businesses. Our mission is to attend to each client and provide him with the best combination of services that suits his business.

SchoolMaster is one of our software specifically designed for the current school management and administration in Ghana.

The software is developed in a way that the less computer literate will be able to use it. Its user interface is very **user friendly**, all you have to do most of the time is point and click.

It includes modules such as:

1. Student Reference Database
2. Student Billing System
3. Payment Tracking System
4. Alumni Database
5. Students Academic Database
6. Continuous Assessment Generator
7. Terminal Report Generator
8. General Ledger

Students Reference Database

This module contains the fields in which students' records are collected and stored. It's made up of four tabs, which are

- Students Information
- Parental Information
- Guardian's Information
- Medical History Information
- Languages spoken / Hobbies Information

This makes the administration of students very easy and with minimal errors.

Students Billing System

With a click of a button, all students in your school have their end of term bills ready. This Module produces the bill that will be given to the student with his/her arrears or credit balance stated on the bill.

This bill is broken down into simplified form so as to enable parents understand with out the help of the accountant.

Sample of the data capture screen

Payments Tracking System

This module administers the payments and issuance of receipts automatically and at the same time keeping tracks of your payments performance or what is referred to as 'Ledger'. Arrears and credit list can be generated by the click of a button.

More than one cash terminal can be created for cashiers so as to serve the parents quickly and to avoid long queues when lots of parents are paying school fees.

At the end of the day each cashier will have a report of money received to cross-check with the amount they have in their cash till.

Payment module screen

The accountant can print a master sales report which comprises reports of all cash terminals and the grand total.

Students Academic Database

In this module all examination records are entered into the database which in future will be used to generate the Continuous Assessment and Terminal Report for students.

Grading are automatically generated once the school sets up their grading preferences.
